SOME QUICK TIPS AND TRICKS

IF YOU'RE SHOOTING WITH YOUR IPHONE

Most mobile devices offer a lot of options when it comes to creating stunning images now-a-days. You'd be shocked to see some of the amazing pictures that can come from your very own iPhone camera as long as you know how to properly snap the shot. Some things to keep in mind:

- Pay attention to your light source. Photos with sun directly in your subjects face can be well lit but harsh, try taking some pictures with the sun behind your subject to create a glow effect.
- Keep your subject in focus. On iPhone you can tap your screen to select the focal point. From there you also have more controls like sliding the sun icon up and down to adjust exposure.
- Get down in the action. When shooting pictures and video of children be sure to crouch down at their level. Also, consider different angles and interesting shots that include moments of movement rather than smiling faces.
